

High pressure cleaning device

For the optimal processing of the Rivolta Safety cleaners

The benefits at a glance

- Power supply independent high pressure sprayer (6bar)
- Efficient processing of Rivolta-electro-cleaning
- Compact construction-special edition
- Robust professional quality
- Specially adapted gun and nozzle equipment

Properties

The compact **high pressure cleaning device** with stainless steel container can be used flexibly at any location. The ergonomic handle in professional quality and the 2.5 meter long spiral hose, which offers a large radius of action, are used for flexible handling.

What is special about this device is the overall technical equipment tailored to the application. A special valve technology in connection with the physical properties of our Rivolta electro-wet cleaning products enable a very high cleaning effect with low material usage.

Fields of application

The **high pressure cleaning device** is excellent for safe, quick and thorough cleaning of electromechanical assemblies such as power slip rings on generators. Due to the compact design, the device is particularly suitable for the use in confined spaces such as e.g. machine rooms of wind power stations.

Mandatory safety notice

The device must **not** be used for cleaning under voltage.
